

SC600 Vent Control

Reliable automatic vent setting control

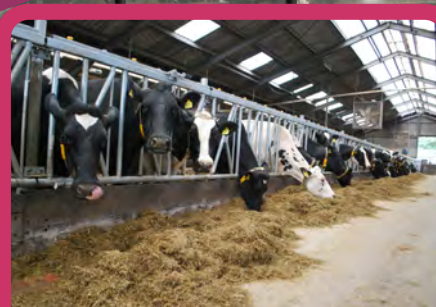

Whether in a glasshouse, a stable or a factory, the climate inside has to be perfect for the plants, animals or humans to function optimally. SERCOM offers the SC600 vent control as a simple and reliable way of automating your ventilation system.

The SC600 vent control consists of a control box, a weather station and a temperature gauge. The control buttons are simple and easy to use. The weather station makes sure that the vents close if it starts to rain and that the vents on the upwind side open after the downwind vents. It also includes a storm protection feature. Control lights provide information about operational status, rain warnings, storm detection and wind direction. Installing the SC600 is simple and can be done by your own installer.

ALSO SUITABLE FOR HOBBY GARDENERS!

Can be connected to multiple motors

Simple to operate

Suitable for greenhouse, stable or factory

Closes in case of rain and storm

Temperature-linked ventilation

Simple installation

Automatic vent setting control
