Climate manager

Easily managing the greenhouse climate

In the greenhouse industry it is important to have an optimum overview and control over the crop. With Sercom's climate computer the greenhouse climate can be controlled very easily. The result: every crop is excellent quality.

Ease of use is the priority and at SERCOM we limit the number of computer settings as much as possible. The control technology focuses on the physiology of the plants in each specific crop. Complex technical settings are fully automated and the computer reacts to any changes in the weather immediately!

Sercom's climate computer is your guarantee of accurate measurements, reliable hardware and comprehensive registration and analysis options.

In brief:

- 60 sections per computer
- Bus connections
- Economic and very long durability
- Always updatable
- Low maintenance costs
- Unaffected by lightening
- Managed by SercoVision, LCD or VGA
