

# Dynamic Adjustable Setpoints

*Adjust settings in a graphical way*

With Dynamic Adjustable Setpoints (DAS), the climate settings can be entered exactly to the desired value from minute to minute.

DAS is a programme that enables you to set up your settings in an extremely simple way. By moving the mouse, you can specify exactly which settings you want to enter for the next 24 hours within each graph. The user determines in what detail this is done. The result is immediately visible in the graph that is formed. This makes it possible to take even better account of your own specific operating conditions and the characteristics of the crop with maximum flexibility.

Each setting can be entered, relative to time, both absolutely and astronomically (in relation to sunrise or sunset). A combination of both options is also possible. As a result, the influence of the sun on your settings is always taken into account in advance. This results in an extremely accurate design.

## In brief:

- Infinite setpoints
- Maximum flexibility
- Graphical overview
- Tailor-made
- Optimised security
- Quick year insight
- Easy to control
