

Screen manager

Effective and flexible

SERCOM's Screen manager is of great value to any grower. In one greenhouse, no fewer than twelve screens can be operated automatically separately from each other. This means that every screen is in the ideal position all day long. The controls are clear and functional. The Screen manager stands for great possibilities and perfect flexibility. And optimal overview and control of the crop is of great importance in greenhouse horticulture. With direct access to the digital manual, the SerControl manager offers you the right tools to quickly and efficiently view and change measurements and setpoints.

The Screen manager can be used very flexibly. And optimal setting of the system results in enormous energy savings.

We base the development of our computer programs on three pillars: taking care of your worries, understandable and innovative.

In brief:

- Twelve screens per greenhouse section
- Supported by a variety of bus systems
- Proportional screens with PAR light
- Elimination of incoming sun rays
- Two screens on one wire framework
- Interaction with other programs
- Managed by SercoVision, LCD or VGA
