

# SercoVision

*Practical and orderly control and registration*

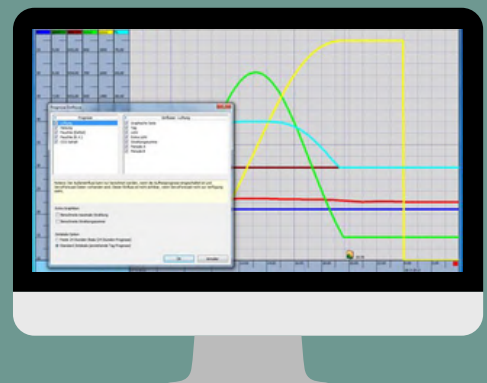

Climate control and irrigation are vital processes in your company. Automation of these processes demands precise control. You want to set the set points as precisely as possible, and you want to know at any particular moment how the whole company is doing. With SercoVision, the practical operating and registration programme of SERCOM, you have the greatest access to the controls. You easily obtain an optimal overview of all the settings and realised figures throughout the company. This allows you to optimise your crop and energy management even further.

SercoVision is easy to operate. The software runs under Windows and connects to the Sercom LCD-control. The navigation programme is orderly, making it simple to select, copy and group blocks. Security is a structural component of the programme so that if you rent out part of your company, the tenant only has access to the relevant blocks or cells.

## In brief:

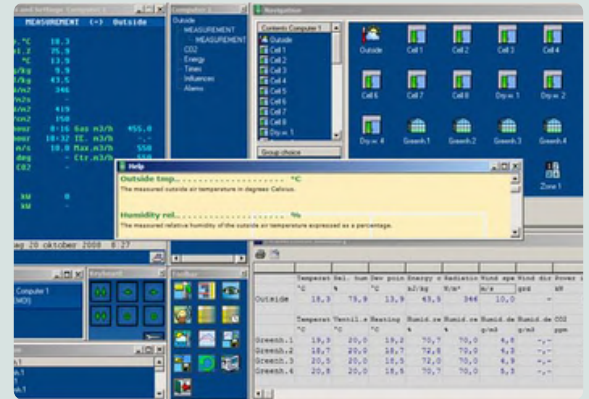

- Greater overview
- Better understanding of relationships
- Runs under Windows
- Maximal optimisation
- Security possible
- Simple to control
- Handy guide

The SercoVision software is updated annually, ensuring that your settings always reflect the newest insights in the field of climate control and automation. It is also possible to extend SercoVision by adding a number of practical options that allow you to get more out of your automation.

The SercoVision program has the following options:

- SercoNet
- SercoView
- SercoCSV
- SMS alarm
- Touchscreen
- Graphics
- High resolution graphics
- Periodic overviews
- LetsGrow.com
- Extensive measurement summary
- Ozon link
