

# Water manager

*Updated program meets all requirements*

Water management is essential for creating an optimum environment for plants and with Sercom's Water manager this is completely under control. This versatile program has every conceivable option possible for growing both inside and outside.

The Water manager can be connected to all irrigation systems. It has a modular construction and can be used by any company. The Water manager works in an independent Sercom computer and the climate computer. The optional LCD control system is resistant to vapour from aggressive fertilisers.

Features:

- 1 to 8 pump units
- Up to 300 valves
- Up to 16 choices of fertiliser per pump unit
- 1 to 40 valve zones
- Up to 60 valves open simultaneously
- Always enough stock solution tanks

## In brief:

- Fast EC and pH control
- Level control A-B containers
- Rinse filters and pipes
- Weighing scales, water content and Tensio meters
- Mixing tank controls
- Rain meter and frost protection
- Managed by SercoVision, LCD or VGA
