

# SERCOM CANalytics

*Complete insight into your business on one screen*

In today's times, it is very important for the modern entrepreneur that all aspects and activities within your company are transparent, in order to be able to make the right decisions quickly.

Sercom Regeltechniek B.V. from Lisse now offers the most complete overview of the situation within your company, in real-time.

The information generated daily by the process computer takes on a completely new dimension via the new platform, with the settings and current measurements being displayed clearly and practically. For example, a graph of a measurement can be shown in the dashboard. These graphs can also be viewed on your mobile phone or tablet. The interactive icons visualise situations that provide a more complete overview.

In addition, it is possible to integrate software packages from other suppliers into the SERCOM CANalytics dashboard. This is not only very useful to get a clear overview, but can also be very important to deal accurately and timely with, for example, energy storage and consumption. By knowing exactly when and how much energy should be used, from which source and at what cost, it is possible to save energy or even convert it into revenue.

An important aspect of this software is that the dashboard can also be approached worldwide via mobile phone or tablet. In addition, it can be used for both process computers equipped with the new CloudVision processor board and systems that still work with the previous V13

## In brief:

- Complete overview
- Personalised dashboard
- Worldwide approachable via mobile phone or tablet
- Web-based software package
- Several functionalities

processor board.

Finally, with SERCOM CANalytics it is possible to make valuable comparisons with very old stored graph data from the past. This information can go back very far, even from when the original SercoVision was installed on the PC, which in some cases is over 20 years ago.

Because the software package is web-based, it is not necessary to install operating programmes on the PC. To work with this system, registration with the relevant login details is sufficient. This makes the software accessible anywhere - if there is an internet connection - such as the aforementioned mobile phone or tablet.

The functionalities that the dashboard can display include:

**Unlimited notifications**

- Real-time live dashboards
- Notifications from SMS, email and WhatsApp
- Extensive reports and cost overviews
- Expansions
- Continuous refreshes of the data
- AI triage

**Planning for harvesting**

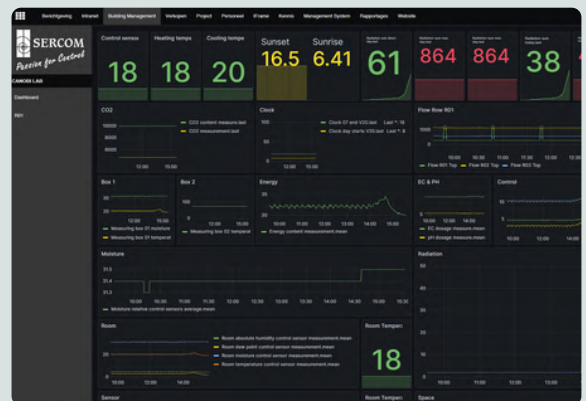

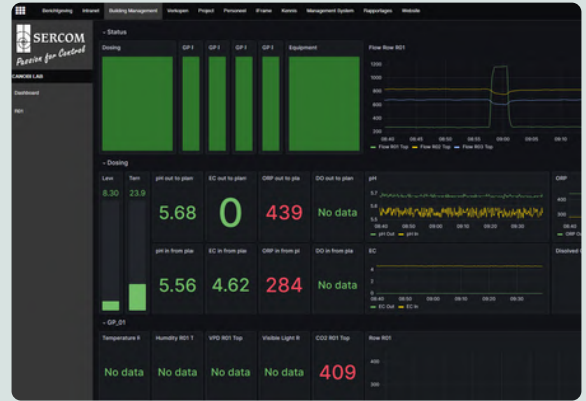

- Warehouse inventory management
- Task management
- Automation of supply lines

**Business tools**

- Bookkeeping
- Sales and purchasing
- HR
- Payroll administration
- CRM
- Report
- Maintenance schedules
- Task and tracking
- Quality control

**Support**

- Remote backups
- Managed updates and new features
- Dedicated support from our team

The SERCOM logo is prominently displayed. Below it, a preview of the 'Dosing' section shows a 'Tank Level V01' graph and a 'Flow Row R01' graph.
